

99acres Commercial Module Automation Testing Report

99acres Commercial Module Automation Testing Report

Project Title

Selenium Automation Testing of 99acres Commercial Module Using Pytest Framework

Project Description

This project focuses on automation testing of the 99acres Commercial Module using Selenium WebDriver with Python and Pytest. The framework validates commercial property search functionality, property navigation, invalid URL handling, invalid location searches, property detail validation, and commercial workflows.

Test Strategy

The testing strategy includes:

- Functional Testing
- UI Testing
- Positive Testing
- Negative Testing
- Regression Testing
- End-to-End Testing

Test Type

End-to-End Testing (E2E)

Preconditions

- User should have valid internet connection
- Browser driver should be configured properly
- Valid mobile number should be available for OTP login
- Selenium WebDriver environment should be configured
- Pytest framework should be installed

Test Data

Field	Value
Mobile Number	Valid registered number
OTP	Manual OTP
City	Mumbai

Test Steps

Step No.	Action	Expected Result
1	Launch browser	Browser launches successfully
2	Open https://www.99acres.com	99acres homepage loads
3	Click Login button	Login popup/page appears
4	Enter valid mobile number	Mobile number entered successfully
5	Click Continue	OTP screen appears
6	Enter OTP manually	User gets logged in
7	Navigate to Commercial tab	Commercial module opens
8	Enter Mumbai in search field	Mumbai location selected
9	Click Commercial Search button	Commercial search executes
10	Verify commercial property results	Property results are displayed

Expected Result

- User should successfully login
- Commercial tab should open successfully
- Mumbai commercial property search should work correctly

- Commercial property listings should be displayed
-

Actual Result

- User successfully logged into 99acres
 - Commercial module loaded successfully
 - Mumbai commercial search executed successfully
 - Commercial property results displayed correctly
-

Status

Passed

Positive Test Cases with Details

Test Case	Description
test_commercial_flow	Verifies the complete commercial module flow. It opens 99acres, switches to the Commercial tab, searches commercial properties, and validates that results are displayed.
test_multiple_city_commercial_flow[Mumbai]	Verifies commercial property search for Mumbai. It checks whether commercial listings load correctly for the selected city.
test_search_shop_showroom[Delhi-Shop]	Verifies that the user can search for commercial shop properties in Delhi and that valid shop results are displayed.
test_search_shop_showroom[Noida-Shop]	Verifies that the user can search for commercial shop properties in Noida and that property results are displayed successfully.
test_view_number_button[Noida]	Opens a commercial property result for

Test Case	Description
	Noida and validates that the View Number button is visible/clickable.
test_click_property_and_open_child_page	Verifies that clicking a property card opens the property detail page in the same tab or a new child tab/window.
test_ivory_county_location_visible	Validates that the location of the selected Ivory County property is visible on the property detail page.
test_ivory_county_title_visible	Validates that the Ivory County property title is visible on the property detail page.

Negative Test Cases with Details

Test Case	Description
test_invalid_location_search[xyz123invalid]	Enters an invalid location value and verifies that the application handles the search properly without crashing.
test_invalid_commercial_url[@@@@]	Opens an invalid commercial URL containing special characters and validates that the application handles the invalid URL gracefully.
test_invalid_commercial_url[invalidcity123]	Opens an invalid commercial URL with a fake city name and verifies that the page does not break and displays proper handling/error behavior.

Test Environment

Application: 99acres Website

Automation Tool: Selenium WebDriver

Programming Language: Python

Testing Framework: Pytest

IDE: PyCharm

Browser: Edge

Operating System: Windows

Reporting Tool: Allure Report

Test Execution

Pytest execution command:

```
pytest -v
```

Allure execution command:

```
pytest --alluredir=allure-results
```

Allure report command:

```
allure serve allure-results
```

Executed Test Suites:

- test_e2e_99acres
- test_for_commercial
- test_property

Test Output

Total Test Cases Executed: 13

Passed Test Cases: 12

Warning / Minor Issue: 1

Failed Test Cases: 0

Validated Functionalities:

- Commercial page loading
- Commercial property search
- Multiple city commercial search
- Shop search functionality
- Invalid commercial URL handling
- Invalid location handling
- Property detail page opening

- Child window handling
- Property title visibility
- Property location visibility
- View Number button validation
- Screenshot capture
- Allure report generation

Test Reports

The report was generated using Allure Report.

Report includes:

- Test suite names
- Test case execution status
- Execution duration
- Passed and warning tests
- Screenshots
- Logs
- Stack traces

Conclusion

The Selenium with Pytest automation testing for the 99acres Commercial Module was successfully completed. The framework validates commercial workflows, invalid search handling, property navigation, and reporting functionality successfully.

BDD Automation Testing Report - 99acres Commercial Module

Project Title

BDD Automation Testing of 99acres Commercial Module Using Selenium, Python, and Behave

Feature Files Used

1. e2e_login.feature
2. for_positive_commercial.feature
3. negative_commercial.feature

Test Strategy

BDD testing was implemented using Feature, Scenario, Given, When, and Then format. The scenarios cover login flow, commercial search, property navigation, filters, fixed property opening, and negative validation.

E2E Login and Commercial Flow

- Open 99acres login popup
- Enter valid mobile number and continue to OTP screen
- Complete login with manually entered OTP
- Search commercial property by location
- Navigate to any commercial property from results page

Positive Test Cases – BDD Detailed Explanation

Scenario	Detailed Explanation
Search commercial property by location	This scenario verifies that the user can search for commercial properties using a valid city/location such as Mumbai or Hyderabad. It validates successful loading of commercial search results.
Search Noida commercial property and apply filters	This scenario validates that after searching commercial properties in Noida, the user can apply filters and the filtered commercial listings are displayed correctly.

Scenario	Detailed Explanation
Navigate to any commercial property from results page	This scenario validates that clicking on a property card from the commercial search results opens the property detail page successfully.
Open fixed commercial property from Noida results page	This scenario verifies navigation to a specific commercial property from Noida search results and validates that the correct property detail page opens successfully.

Negative Test Cases – BDD Detailed Explanation

Scenario	Detailed Explanation
Search commercial property with invalid location	This scenario verifies how the application handles invalid commercial location input such as @@@@. It validates that the application does not crash and handles invalid searches properly.
Search commercial property without entering location	This scenario validates the behavior when the user clicks the Search button without entering any location. It ensures that the application properly handles empty search requests and prevents invalid search execution.

Test Environment

Application: 99acres
 Module: Commercial
 Automation Tool: Selenium WebDriver
 Language: Python
 BDD Framework: Behave
 Design Pattern: Page Object Model
 Browser: Edge
 IDE: PyCharm
 Reports: Behave / Allure Report

Test Execution

BDD tests executed using:
behave

Feature-wise execution:
behave features/e2e_login.feature
behave features/for_positive_commercial.feature
behave features/negative_commercial.feature

Test Output Summary

Total Feature Files: 3
Total Scenarios: 11
Positive Scenarios: 8
Negative Scenarios: 2
E2E Scenario: 1

Conclusion

The BDD automation framework successfully validates login, commercial tab navigation, commercial property search, property detail navigation, filter validation, fixed property opening, and invalid commercial searches for the 99acres Commercial Module.
